Who Are We?

CMTS is FedRAMP® Moderate authorized and aligns with key compliance standards, including NIST 800-171, CMMC, SOC 2, HIPAA, and GovRAMP. Its AWS-hosted environment ensures encryption of data at rest and in transit, while role-based access controls safeguard sensitive case information.

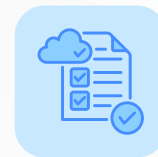

How We Empower EEO Agencies

Effective EEO compliance requires a case management system that is secure, configurable, and capable of managing complex processes from intake to resolution. CMTS (Case Management and Tracking System) empowers agencies to investigate, manage, and resolve discrimination-related complaints with precision, transparency, and accountability.

Security & Compliance

FedRAMP® Moderate authorization for cloud-hosted environments

NIST 800-171, SOC 2 Type II, HIPAA, & GovRAMP compliance standards

AWS cloud hosting with encryption at rest and in transit

Role-based access controls & permissions for sensitive case data

These features help ensure that confidential personnel and complaint data is securely managed and protected at every stage of the EEO process.

Discrimination Complaint Intake & Investigation

Scenario:

An employee or member of the public submits a complaint alleging discrimination on the basis of race, gender, age, disability, or another protected category.

How CMTS Helps:

CMTS streamlines the intake process through a secure, public-facing online form that collects consistent and complete data. Submitted complaints are automatically routed into the CMTS system, eliminating manual entry errors and improving intake efficiency.

Once captured, investigators can:

- ✓ Assign and triage complaints to the appropriate personnel
- ✓ Automate reminders and deadline triggers to maintain statutory compliance
- ✓ Track cases through each stage using configurable workflows
- ✓ Enforce validation rules to ensure required data is collected prior to case advancement

This structured approach ensures every allegation is addressed with thorough documentation, audit trails, and real-time status updates.

Employment Practices Review & Compliance Tracking

Scenario:

Agencies are required to monitor employment practices, identify complaint trends, and assess compliance with federal and state EEO laws.

How CMTS Helps:

CMTS supports agency-wide visibility by enabling the tracking of trends across departments, case types, or time periods.

Configurable dashboards and ad hoc reports allow agencies to monitor:

- ✓ Timeliness of complaint processing
- ✓ Workload distribution
- ✓ Areas of emerging risk

With advanced filtering and export capabilities, CMTS ensures agencies can generate compliance reports that meet both internal needs and external regulatory requirements.

Mediation, Settlement, & Resolution Management

Scenario:

Some EEO complaints may be resolved without formal investigation, through mediation, early resolution, or settlement agreements.

How CMTS Helps:

CMTS supports alternative resolution workflows that enable seamless transitions from investigative to mediation stages. The system securely logs all communications, outcomes, and agreements, ensuring a transparent and defensible resolution process.

Additional capabilities include:

- ✓ Tracking informal complaints and escalations to formal investigations
- ✓ Managing documentation through version-controlled uploads and sign-offs
- ✓ Automating notifications to keep all parties aligned on timelines and tasks
